

A Look at the Ancestry DNA Test and Results

Richard Reid

5/16/15

What is the Ancestry DNA test?

AncestryDNA is a cutting edge DNA testing service that utilizes some of the latest autosomal testing technology to revolutionize the way you discover your family history. This service combines advanced DNA science with the world's largest online family history resource to predict your genetic ethnicity and help you find new family connections. It maps ethnicity going back multiple generations and provides insight into such possibilities as: what region of Europe are my ancestors from, or am I likely to have East Asian heritage? AncestryDNA can also help identify relationships with unknown relatives through a dynamic list of DNA matches.

What do the results tell you?

Your AncestryDNA results include information about your ethnicity across 26 regions/ethnicities and identifies potential relatives through DNA matching to others who have taken the AncestryDNA test. Your results are a great starting point for more family history research, and it can also be a way to dig even deeper into the research you've already done.

How large is the Ancestry DNA database?

AncestryDNA is the leader in DNA testing for family history and includes more than 850,000 people who have taken the AncestryDNA test as well as the ability to access Ancestry, the world's largest online family history resource, which includes millions of family trees and over 15 billion historical records.

Y-DNA Tests

- Used For: paternal lineage only
- Available To: males onlyY-DNA tests specific markers on the Y-Chromosome of your DNA known as Short Tandem Repeat, or STR markers. Because females do not carry the Y-chromosome, the Y-DNA test can only be used by males. It passes down directly from father to son.

mtDNA Tests

- Used For: Deep (distant) maternal lineage
 - Available To: females; males testing their mother's lineage
- Mitochondrial DNA (mtDNA) is contained in the cytoplasm of the cell, rather than the nucleus, and is only passed by a mother to both male and female offspring without any mixing. This means that your mtDNA is the same as your mother's mtDNA, which is the same as her mother's mtDNA, and so on. mtDNA changes very slowly so it cannot be used to determine close relationships as well as it can determine general relatedness.

Autosomal DNA Tests

- Used For: Ethnic ancestry, plus relative connections on all branches of your family tree
- Available To: males and females Autosomal DNA (atDNA) tests look at genetic markers found in the 22 chromosome pairs which contain randomly mixed DNA from both parents, basically all chromosomes except the sex chromosome, although some testing companies are now also providing data from the X chromosome as part of this test as well.

Autosomal DNA

- Autosomal DNA contains almost the entire genome, or blueprint, for the human body; where we find the genes that determine our physical characteristics, from hair color to disease susceptibility. Because autosomal DNA is inherited by both men and women from both parents and all four grandparents, it can be used to test for relationships in all family lines.

Autosomal DNA - Genealogy

- As a genealogy application, autosomal testing was originally introduced as a tool for determining biogeographical origins, or the percentage of various population groups (African, European, etc.) that exist in your DNA. Labs are now, however, offering extended family autosomal testing, which can help verify biological relationships through the grandparent generation, and potentially point to ancestral matches back as far as five or six generations, and sometimes beyond.

The DNA Test Kits - \$99

Your Ancestry DNA Page

The screenshot shows a web browser window with the URL `dna.ancestry.com/#/insights/02D1AD35-540B-4A6F-8592-E7051B402871`. The page header includes the AncestryDNA logo and an "Activate a test" button. The profile section features a silhouette icon, the name "Richard Reid", and a note: "This test is shown to matches as rdrconsult" and "Linked to Richard Dwight Reid". A "SETTINGS" button is visible in the top right of the profile area.

The "Ethnicity estimate" section contains a pie chart and a legend:

Region	Percentage
Great Britain	61%
Scandinavia	21%
Europe West	6%
Other regions	5%

A "See full ethnicity estimate" button is located below the chart.

The "DNA matches" section displays a grid of 10 circular profile pictures. To the right of the grid, there are statistics: "4 Shared ancestor hints", "Starred matches", and "39 4th cousins or closer". A "View All DNA matches" button is positioned below the grid.

At the bottom, a dark banner reads: "We haven't found a New Ancestor Discovery for you yet—stay tuned... Our latest scientific innovations make it possible to discover ancestors you never knew you had—just through your DNA. We haven't uncovered any for you yet, but we'll keep looking." Below this text are three small portrait cards for "William Ogden", "Elizabeth Pennington", and "Cly".

Family Connection

Hi, I'm David Evans and I believe we're related and it would be interesting to know where. In my tree I have : Bragg, Gallop, Samms, White, Walker, Linstead. Would be nice to swap data. Regards, D.

DNA Results Possible 4-6th Cousins through Major's and Anderson's

Richard That is amazing that someone can connect you with 7000 people. I am having a hard enough time just trying to find a handful of my ancestors in Newfoundland. I agree that this DNA connection is also amazing. If you need any help with these names I do have some info

DNA Results Possible 4-6th Cousins through Major's and Anderson's

Hello, I checked my family tree and we might be related through Frances Major, my second great grandmother, whose parents are John Major b. 1818 and Eleanor Evans born 1822. Frances married Eli Rogers 7 Sept 1847 Fortune. We might have some sort of connection
